**Annual Groundwater Monitoring Report
March 2005
(File No. 95-036)**
Boeing Realty Corporation
Former C-6 Facility
Los Angeles, California

Dear Ms. Townsend:

On behalf of Boeing Realty Corporation (BRC), Rubicon Engineering Corporation is transmitting one copy of the Annual Groundwater Monitoring Report for BRC's former C-6 Facility located in Los Angeles, California. If you have any questions, please do not hesitate to call.

Respectfully submitted,

RUBICON ENGINEERING CORPORATION

Los Angeles, California

Page 3
May 26, 2005

1.0 INTRODUCTION

This report documents annual groundwater monitoring performed at the Boeing Realty Corporation's (BRC) Former C-6 Facility (the site) located in Los Angeles, California. This report also presents additional groundwater data collected during March 2005 as part of the bioremediation post-injection monitoring in the former Building 2 area. The remainder of this section presents the purpose and scope of the annual groundwater monitoring event and the report organization.

1.1 PURPOSE AND SCOPE

The purpose of the groundwater monitoring reported herein is to evaluate the lateral and vertical distribution of VOCs in groundwater, the direction/gradient of groundwater flow, and provide BRC with the data necessary to manage any future groundwater remediation effort at the site. The groundwater monitoring program is summarized in Table 1. The annual groundwater monitoring event was performed in accordance with the *Groundwater Monitoring Work Plan 2005* (Haley & Aldrich, 2004) and included the following:

- Measured static groundwater levels in 26 wells.
- Measured field parameters {pH, dissolved oxygen (DO), oxidation-reduction potential (ORP), electrical conductivity (EC), and temperature} in 25 monitoring wells.
- Collected groundwater samples from 25 monitoring wells and analyzed for volatile organic compounds (VOCs) using EPA Method 8260B.
- Collected quality control samples, including decontamination water, and trip, field, and equipment blanks on each day of sampling.

Also, groundwater monitoring and sampling results from 13 wells related to the bioremediation activities near the former Building 2 area are included in this report.

1.2 REPORT ORGANIZATION

Section 2.0 presents and evaluates the groundwater monitoring and sampling results. The quality assurance/quality control (QA/QC) measures are summarized in Section 3.0. Appendix A presents the groundwater monitoring and sampling procedures. Appendix B contains the groundwater sampling forms and field data. Water level hydrographs and VOCs versus time graphs are presented in Appendix C. The laboratory reports and chain of custodices are presented in Appendix D. The data validation package is included in Appendix E.

Annual Groundwater Monitoring Report – March 2005

Former C-6 Facility
Los Angeles, California

2.0 GROUNDWATER MONITORING AND SAMPLING RESULTS

This section presents an evaluation of the groundwater monitoring and sampling results for March 2005. Monitoring Wells WCC-3S, 6S, 12S and TMW-7 and TMW-8 were not accessible during the annual event because of redevelopment activities. These wells are scheduled for sampling during the semi-annual event in September 2005.

2.1 GROUNDWATER ELEVATIONS

Depth to groundwater was measured relative to the top of the well casing by Tait Environmental Management (Tait) of Santa Ana, California on March 1 through March 7, 2005. Tait's groundwater monitoring and sampling procedures and field data forms are presented in Appendix A and B, respectively. The well locations are shown on Figure 1. The reference elevations used to calculate groundwater elevations are included in Table 2. A summary of the groundwater elevations for March 2005 are presented in Table 3. To facilitate comparison between current and previous water level data, a compilation of historical water level data is presented in Table 4 and the hydrographs for the wells monitored are included in Appendix C.

2.1.1 B-Sand

The depth to groundwater ranged from 59.90 to 69.90 feet which corresponds to groundwater elevations ranging from -10.52 to -10.99 feet above mean sea level (AMSL). A groundwater contour map is presented in Figure 2. The average hydraulic gradient in the B-Sand across the site is approximately 0.00093. Groundwater flow in the B-Sand is generally to the south.

2.1.2 C-Sand

The depth to groundwater ranged from 62.72 to 67.25 feet which corresponds to groundwater elevations ranging from -11.21 to -11.65 feet AMSL. A groundwater contour map is presented in Figure 3. The average hydraulic gradient in the C-Sand across the site is approximately 0.0008. Groundwater flow in the C-Sand is generally to the south/southwest.

2.2 GROUND WATER QUALITY

The concentrations of detected VOCs from samples collected during March 2005 are summarized in Table 5. A compilation of historical water quality data is presented in Table 6 to facilitate comparison between current and previous water quality data. Concentration versus time graphs for select VOCs are presented in Appendix C. Copies of the laboratory data are included in Appendix D.

2.2.1 B-Sand Water Quality

A total of 28 wells completed in the B-Sand were sampled in March 2005. Eighteen wells were sampled between March 1 and 7, 2005 as part of the annual groundwater monitoring program and 10 wells were sampled on March 19 and 20, 2005 as part of the bioremediation post-injection monitoring.

Annual Groundwater Monitoring Report – March 2005

Former C-6 Facility
Los Angeles, California

Page 5
May 26, 2005

The distribution of TCE in the B-Sand is shown in Figure 4. TCE was the most prevalent compound found in the B-Sand, both in terms of concentration and the number of wells in which TCE was detected. Specifically, TCE was detected in 25 of the 28 wells sampled in March 2005 at concentrations ranging from 3.8 to 18,000 µg/l. The highest concentrations of TCE occurred in Well IRZMW003A, located within the Building 2 source area. The TCE plume presented in Figure 4 is generally consistent with previous plumes dating back to 2001 (Haley & Aldrich, 2002). As shown in Table 5, other VOCs with multiple detections include 1,1,-DCE, cis-1,2-DCE and chloroform.

2.2.2 C-Sand Water Quality

A total of 10 wells completed in the C-Sand were sampled in March 2005. Seven wells were sampled between March 1 and 7, 2005 as part of the annual groundwater monitoring program and 3 wells were sampled on March 19, 2005 as part of the bioremediation post-injection monitoring.

The distribution of TCE in the C-Sand is shown in Figure 5. TCE was the most prevalent compound found in the C-Sand, both in terms of concentration and the number of wells in which TCE was detected. Specifically, TCE was detected in 9 of the 10 wells sampled in March 2005 at concentrations ranging from 10 to 7,700 µg/l. The highest concentration of TCE occurred in Well IRZCMW002, located in the southeast portion of Parcel C. TCE concentrations in the C-Sand are generally consistent with historical values (Table 6). Chlorobenzene was present in wells CMW001 and CMW002 at concentrations up to 15,000 µg/l. Chlorobenzene is believed to originate at the Montrose property south of the site. As shown in Table 5, other VOCs with multiple detections include 1,1,-DCE, cis-1,2-DCE, and chloroform.

2.2.3 Monitored Natural Attenuation Parameters

Monitored natural attenuation (MNA) parameters, including pH, DO, ORP, EC, and temperature were measured during purging of the groundwater monitoring wells. Table 6 presents historical MNA parameters for wells at the site. Low dissolved oxygen concentrations and ORP measurements in the vicinity of Wells WCC-03S, TMW-2, and WCC-04S indicate the presence of anaerobic conditions in the Building 1/36 area. These conditions are conducive to reductive dechlorination processes. Elevated dissolved oxygen levels and oxidation/reduction potentials have been observed in wells located within the vicinity of the former Building 2 (Wells MWB012, TMW-04, and TMW-05) suggesting aerobic conditions exist in this area. The partially-depleted dissolved oxygen concentrations and oxidation/reduction potentials near the southern site boundary (Wells TMW-11 and XMW-09) indicate that some anaerobic activity may be occurring.

3.0 QUALITY ASSURANCE/QUALITY CONTROL MEASURES

Several QA/QC measures were implemented to provide qualitative and quantitative checks on data. Field QA/QC measures for the March 2005 monitoring event included duplicate samples from Wells MWB014 and MWC021, five trip blank samples, five equipment rinse blank samples, five decontamination water blanks, and five field blank samples. The results of these QA/QC measures are discussed below.

3.1 DUPLICATE SAMPLE ANALYSES

Duplicate samples were collected from Wells MWB014 and MWC021 to evaluate data precision, expressed in terms of percent difference. Field duplicates are samples collected in the field, from the same source, using identical sampling procedures. The relative percent difference (RPD) is calculated as follows:

$$\frac{\pm 2(D_1 - D_2)}{(D_1 + D_2)} * 100$$

where D_1 = Original analysis and
 D_2 = Duplicate analysis

The primary and duplicate results from these wells (Table 5) indicate the RPD ranged from 3.2 to 5.7 percent. The low RPD between the duplicate samples indicates high precision of the laboratory analysis.

3.2 BLANK SAMPLE ANALYSES

Blank samples analyzed for VOCs as part of the overall QA/QC program included one trip, field, decontamination water, and equipment rinse blank samples per day. The results of the blank sample analyses are included in Table 5 and discussed below. The concentrations detected in all of the blank samples were below the method detection limit and are considered estimated values.

3.2.1 Trip Blanks

One trip blank sample was submitted to the laboratory each day of sampling in the same cooler as the groundwater samples to check for possible cross-contamination. One of the trip blank samples contained 4.9 µg/l of acetone while another trip blank contained 0.83 µg/l of methylene chloride.

3.2.2 Equipment Rinse Blanks

One equipment rinse blank was collected each day of sampling after decontaminating the sampling equipment with deionized water. One of the equipment rinse blanks contained acetone at a concentration of 3.4 µg/l and another contained TCE at 0.51 µg/l.

Annual Groundwater Monitoring Report – March 2005

Former C-6 Facility
Los Angeles, California

Page 7
May 26, 2005

3.2.3 Field Blanks

Field blanks are samples that are filled in the field with laboratory-supplied water to check for possible contamination in the sample collection methodology. Three of the five field blank samples contained TCE at concentrations ranging from 0.44 to 0.99 µg/l.

3.2.4 Decontamination Water Blanks

Two of the decontamination water blank samples contained detectable VOCs; one sample contained 3.2 µg/l of acetone while another sample contained 0.55 µg/l of TCE.

3.3 DATA VALIDATION

Data validation was performed by Laboratory Data Consultants (LDC) of Carlsbad, California. A copy of the data validation report is presented in Appendix E. Three samples were submitted to LDC for validation. One sample (MWB019) was subject to Tier 1 validation, one sample (CMW002) was subject to Tier 2 validation, and one sample (WCC_4S) was subject to Tier 3 validation. Based on the results of the data validation report, it appears that the data show an acceptable degree of precision and accuracy. The appropriate data qualifiers have been included in Table 5.

Groundwater Monitoring and Sampling Procedures

1.0 GROUNDWATER MONITORING & SAMPLING PROCEDURES

1.1 WATER LEVEL MEASUREMENT

Static groundwater levels were measured in twenty-six (26) monitoring wells manually using an electronic water level indicator instrument (i.e. Solinst) on March 1-7, 2005. Additionally, each monitoring wells were gauged for total depth (TD) using the same water level indicator used for the depth to water measurements.

Water level measurements were taken from the top of the wellhead casing indicating the top of casing (TOC) elevation (feet above mean sea level [ft-msl]) determined by a State-Licensed Land Surveyor (surveyor). If there is no visible survey mark to take the measurement, the well was gauged from the north side of the top of casing and recorded on the Well Gauging Data Sheet (WGDS).

1.1.1 *Instrument Calibration*

Water level indicators were calibrated each sampling event. Calibration was performed by comparing the water level indicator measuring tape against a steel tape. The calibration dates, times, instrument identification, method, and result was recorded on the Instrument Calibration Sheet (ICS).

1.1.2 *Instrument Decontamination*

Equipment used in the gauging of groundwater monitoring wells, that were inserted into the well casing and static groundwater were decontaminated prior to and/or after each use at any well location.

The water level indicator was decontaminated between each well using one (1) non-phosphate wash, two (2) tap water rinses, followed by one (1) distilled-water rinse. The equipment was dried either using a clean paper towel or an electric-driven air-compressor or a hair dryer.

1.3 Field Procedures

Wells to be gauged were identified by personnel collecting measurements by comparing current WGDS's, site plans, individual well markings, and historical data tables. If there is no established mark on top of casing, the measurement was taken from the north side of the casing. Each measurement point description was logged in detail on the WGDS.

The depth to water measurements was taken three (3) times at a minimum to allow for the recording of a correct measurement with no variations. Measurements and any observations were recorded on the WGDS.

Each water level measurement was compared to the historical measurements or previous measurement obtained from the same well. If the current measurement is significantly different than the previous measurements or the water level changed to opposite direction of the other wells (i.e. all other wells showing increase in depth to water but the last well shows decrease) the following QC procedures were performed in the field:

- Verified the well identification and location.
- Verified that the instrument read accurate (checked calibration)
- Verified that the measurement was repeated several times (3 times minimum).
- Verified that there was no foreign material in the well affecting the tape length.
- Verified that there was no kink on the tape
- Recorded on the form the true reading and mention that these QC procedures were performed on the comments section of the field form

1.2 GROUNDWATER SAMPLE COLLECTION

Groundwater samples were collected from twenty-five (25) wells using a submersible pump, and dedicated tubing between March 1 and 7, 2005.

1.2.1 Water Parameter Readings

Equipment was thoroughly decontaminated prior to lowering in to the well. Pump was set approximately 3 to 5 feet below the water table. Purging was performed at flow rates less than 2 gpm. Water quality parameters were measured at the start of well pumping and at minimum every ½ wet casing volume removed. The wells were purged a minimum of three wet casing volume or until the parameters stabilize to within 10%. The following water quality parameters were measured using Horiba® U22 water quality meter (U22) and flow through cell (FTC): pH, temperature (°C), electrical conductivity, turbidity, dissolved oxygen (DO), oxygen reduction potential (ORP). The following steps were performed when collecting water parameter readings.

- U22 was calibrated to specified calibration (manufactures calibration solution), and zero DO solution.
- Water quality parameters were collected at start of pumping and for every 1/2 wet casing volume for three (3) consecutive wet casing volumes until parameters stabilize to within 10%.
- Current water parameter measurements were compared with historical data.
- Once well purging was finished U22 and FTC were decontaminated.

1.2.2 Groundwater Monitoring Well Evacuation

The following procedures were used for groundwater monitoring well purging:

- Reviewed HSP
- Calibrated field equipment to proper specifications
- Followed sampling order strictly
- Collected all required Q/C samples
- Ensured generators and fuel driven equipment were placed down-wind from sample locations
- Measured and recorded depth to water (DTW) and TD
- Determined casing volume to be purged from well using one of the methods described below.

2-inch diameter well:

$$(\text{height of water column}) \times (.163) = \text{volume of water column in gallons}$$

4-inch diameter well:

(height of water column) x (.65) = volume of water column in gallons

6-inch diameter well:

(height of water column) x (1.47) = volume of water column in gallons

At least three (3) casing volumes were purged from each well. If three casing volumes cannot be obtained and the well goes dry with minimum practical pumping rate, then the well was allowed to re-charge to 80% of the static water level (water column height x 0.80 – TD) before collecting sample. If 80% recovery exceeds 2 hours, the well was sampled as soon as enough water accumulated to fill all sample containers.

The pump flow was gauged manually using a graduated measuring stick calibrated to 55 gallon drum or 5 gallon bucket. Total volume purged was measured with this graduated stick and recorded every ½ wet casing volume.

1.2.4 Sample Collection

Groundwater samples were collected in the appropriate laboratory sample containers from the discharge end of the pump or bailer. Pump flow was set at 0.2 gpm or less during collection to prevent aeration and turbulence of samples. Sample container labels were filled out at the well location and placed on containers immediately after samples are collected.

The samples were placed in a cooler in a manner to prevent breaking or cross-contamination during transport. Samples were placed in plastic zip-lock bags to prevent the possibility of cross-contamination. The cooler was filled with ice and samples kept a desired temperature of 4 °C., pending transport to the project analytical laboratory (PAL).

1.3 DECONTAMINATION

Equipment used in the gauging and sampling of groundwater monitoring wells, that is inserted into the well casing and static groundwater was decontaminated prior to and/or after each well location. The equipment was decontaminated between each well using one (1) non-phosphate wash, two (2) tap water rinses, followed by one (1) distilled-water rinse. Water generated during decontamination activities was contained in 55-gallon drums and placed in a pre-designated area for disposal. Waste was inventoried daily on an IDW Inventory Record.

Once decontamination was completed existing latex gloves were removed and a new pair were used at the next well location.

Groundwater sampling forms and field data

3/1/05

START OF DAY CHECKLIST

- Review Health and Safety plan and emergency procedures/field protocol
- N/A For WCC-5S, inform John Jacobs at NearCal.
Call Earth Tech inform about work area
- N/A Call for drums ~ Drums ordered prior to start of sampling event.
- Combine bottles by sample analysis for all wells prior to beginning job
- Calibrate Horiba with auto calibration and DO - OK
- One temperature blank per cooler
- Label Trip Blanks and log in COC
- Decon Equipments - 4 rinses : 1 soap, 2 tap water rinse, 1 DI rinse.
- Collect Equipment Blank per team, label and log in COC
1 EB per day, per H+A workplan. Also collect one decon rinse blank per day
- Decontamination buckets with soap (3-buckets) - 4 buckets, see above.

DAY END CHECKLIST

- Confirm number of samples in cooler match analysis requirements
- Make sure trip blank for each cooler
- Double check ECOC with second set of eyes for accuracy
- Fax Data sheets and ECOC to office every day
- Create billing report for extra supplies used on job
- Decontaminate all Horiba's and store in water
- Ensure Conex is organized and trash is disposed
- Ensure there is enough supply for the next day

Mitya Chandan 3/1/05

3/2/05

START OF DAY CHECKLIST

BRC GW MONITORING DAILY FIELD REPORT

Project Name: BRC C-6 Torrance	Project #: EM 2303D	Date: 3/1/05
Personnel: NC/SY	Sub Contractors: NA	

Task: GROUND WATER SAMPLING, per Hately & Aldrich Nov. 2004 Work Plan.

Time Arrived at Site:	Time Left Site:	Total Hours at Site:

Equipment List:

- Solinst Water Level Meter Serial #: _____
- Solinst Water/Product Level Interface Meter Serial #: _____
- Horiba U-22 Water Quality Meter Serial #: _____
- Air Monitoring Type: _____ Serial #: _____
- Pump Type: Waterra / Grundfos Serial #: _____
- Generator Type: _____ Serial #: _____
- Company Truck License #: Chevy 2500, # S-10
- Other(s): Inverters

Description of Work Performed: (Summarize all field activities in a chronological sequence. Include tailgate health and safety meeting, personnel/visitors at site, calibration times and methods.)

Arrived on site at ~7:30. Horibas calibrated ~~at site~~ factory.
Set up decon station (1 soap, 2 tap water rinse, 1 DI rinse)
Conduct tailgate H+S meeting.
Collect decon blank EB-TAIT030105_0001 @ 1000
Rinsate (equipment) blank EB-TAIT030105_0001 @ 0930, since
no wells to be sampled today have not been marked for EB collection.
Spoke to John Jacobs w/NearCal re: uncovering WCE-12S, showed him approx.
well location.

March 2005 GW Sampling

Project Name: BRC Former C-6

Project #: EM2303

Date: 3/1/05

Decided to purge into drums, soil surrounding Baker Tank still muddy. Called Scott Lattimore for drum ID #s.

Sampled following wells: MWB013 @ 1110 - NC
WCC-5S @ 1157 - S4

TMW-10 @ 1320 - NC , TMW-11 @ 1340 - S4

TMW-14 @ ~~1510~~¹⁵¹⁰ - S4 , collected field blank FB-TAIT030105-0001 @ 1430
MWCO21 @ 1445 - NC , collected duplicate sample

Re: XMW-19 unable to sample today , need to coordinate unlocking well with Robert Neumann of Earthtech → available to unlock wed. afternoon / Thursday morning.

- Informed by Dennis Carlson of Boeing that drums need to be moved to staging area near Lot 8 trailer.

- Samples picked up on-site @ 1500.

- Informed Chi Chi Tsai to unlock gates S. of Knox Street to access wells → security guard to leave unlocked.

- Solinst Water Level Meter Serial #: _____
- Solinst Water/Product Level Interface Meter Serial #: _____
- Horiba U-22 Water Quality Meter Serial #: _____
- Air Monitoring Type: _____ Serial #: _____
- Pump Type: Waterra / Grundfos Serial #: _____
- Generator Type: _____ Serial #: _____
- Company Truck License #: Chevy 2500, S-10
- Other(s): Inverters.

Description of Work Performed: (Summarize all field activities in a chronological sequence. Include tailgate health and safety meeting, personnel/visitors at site, calibration times and methods.)

Arrived on-site at ~ 730 a.m.
Set up decon station, collected decon blank DB-TAIT030205-0001 @ 0830.
Calibrated instruments
Collected equipment blank at EB-TAIT030205-0001 @ 0825,
before sampling MWB014.

Client Signature (if applicable): _____ Date: _____

Tait Environmental Management, Inc.

Engineering • Environmental • Compliance

March 2005 Sampling		
Project Name: BRC C-6 Torrance	Project #: EM2303	Date: 3/2/05

S4 sampled wells:

TMW-15 @ 1050, collected field blank FB-TAIT030205-0001 @ 1036.

WCC-9S @ 1240

TMW-06 @ 1428

NC sampled wells:

MWB014 @ 1040, collected duplicate sample.

MWB019 @ 1205

MWC017 @ 1420

Transferred all purge water generated today into Baker tank.

Spoke w/ Robert Neumann, will meet tomorrow morning to unlock Montrose wells (XMW-09 & XMW-19).

Moved ~~empty~~ all drums from drop-off point to staging area, per Dennis Carlson.

Samples picked up by STL at 1500.

Tait Environmental Management, Inc.

BRC GW MONITORING DAILY FIELD REPORT

Project Name: BRC C-6 Torrance		Project #: EM 2303D.	Date: 3/3/05
Personnel: NC/SY	Sub Contractors:	NA	

Task: GROUND WATER SAMPLING, per Haley & Aldrich workplan.

Time Arrived at Site:	Time Left Site:	Total Hours at Site:

Equipment List:

- Solinst Water Level Meter Serial #: _____
- Solinst Water/Product Level Interface Meter Serial #: _____
- Horiba U-22 Water Quality Meter Serial #: _____
- Air Monitoring Type: _____ Serial #: _____
- Pump Type: Waterra / Grundfos Serial #: _____
- Generator Type: _____ Serial #: _____
- Company Truck License #: Chevy 2500, S-10.
- Other(s): Inverters.

Description of Work Performed: (Summarize all field activities in a chronological sequence. Include tailgate health and safety meeting, personnel/visitors at site, calibration times and methods.)

Arrived on site at ~7:30.
Set up decon station, collected decon blank DB-TAIT030305-0001
at 0945, decontaminated equipment.
Calibrated instruments - OK.
Coordinated w/ Robert Neumann, of Earth Tech to
open XMW-09, XMW-19.

Client Signature (if applicable): _____

Date: _____

March 2005 G.W Sampling		
Project Name:	Project #:	Date:
BRC C-6	EM2303.D	3/3/05

Team Sampled following wells.

XMW-09 @ 11:10 NC, used TAIT tubing (100')

Used 100' TAIT tubing XMW-19 @ 12:00 S4, collected Field Blank @ ~~11:15~~ 11:15

WCC-15 @ 12:55 NC

CMW001 @ 14:18 S4

MWB012 @ 14:20 NC, collected equip. blank @, 13:30.

Spoke w/ John Jacobs of NearCal again re: uncovering
WCC-125, said he'd get to it.

STL picked up samples @ 14:50.

Emptied drums of purge water into Baker tank on-site.

Informed security guards to leave gates unlocked on
3/5/05 for sampling S. of Knox St.

Tait Environmental Management, Inc.

Engineering • Environmental • Compliance

BRC GW MONITORING DAILY FIELD REPORT

Project Name:	March 2005 Sampling BR C-6	Project #: EM 2303D	Date: 3/4/05
Personnel:	NC/SY	Sub Contractors:	NA

Task: GROUND WATER SAMPLING, per Haley & Aldrich Workplan.

Time Arrived at Site:	Time Left Site:	Total Hours at Site:

Equipment List:

- Solinst Water Level Meter Serial #: _____
- Solinst Water/Product Level Interface Meter Serial #: _____
- Horiba U-22 Water Quality Meter Serial #: _____
- Air Monitoring Type: _____ Serial #: _____
- Pump Type: Waterra / Grundfos Serial #: _____
- Generator Type: _____ Serial #: _____
- Company Truck License #: Chevy 2500, S-10.
- Other(s): Inverters

Description of Work Performed: (Summarize all field activities in a chronological sequence. Include tailgate health and safety meeting, personnel/visitors at site, calibration times and methods.)

Arrived at site ~9:30, due to inclement weather early morning. WCC-12S hadn't been uncovered. Set up decon station, collected decon blank @ 10:00. Decontaminated equipment, calibrated instruments. Spoke w/ John [redacted] of NearCal re: WCC-12S uncover, said he'd do it.

Client Signature (if applicable): _____ Date: _____

Tait Environmental Management, Inc.

March 2005 GW Sampling

Project Name: BRC C-6

Project #: EM2303D

Date: 3/4/05.

Team sampled following wells:

CNW0002 @ 1230, equipment blank at 11:20. NC

BL-03 @ 12:43, casing and well box broken,
well protected only by cone placed on top.
S4 took picture.

MWCO16 @ 14:20, used 100' TAIT tubing.

DAC-PI @ 14:25

STL picked up samples @ 14:45.

Emptied purge water into Baker Tank.

WCC-12S not uncovered.

Informed security to leave gates unlocked on Mon.,
3/7/05 for sampling S. of KNOX street.

Tait Environmental Management, Inc.

Engineering • Environmental • Compliance

NOTE (S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

NOTE (S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

NOTE (S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

NOTE (S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

NOTE(S) :

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

ATTN: Mr. Matt Hillman

April 14, 2005

SUBJECT: Boeing, Bldg. C-6, Data Validation

Dear Mr. Hillman,

Enclosed are the final validation reports for the fraction listed below. These SDGs were received on March 24, 2005. Attachment 1 is a summary of the samples that were reviewed for each analysis.

LDC Project # 13309:

<u>SDG #</u>	<u>Fraction</u>
E5C020391,	Volatiles
E5C040421,	
E5C070232	

The data validation was performed under Tier 1, Tier 2 and Tier 3 guidelines. The analyses were validated using the following documents, as applicable to each method:

- USEPA, Contract Laboratory Program National Functional Guidelines for Organic Data Review, October 1999
- EPA SW 846, Third Edition, Test Methods for Evaluating Solid Waste, update 1, July 1992; update IIA, August 1993; update II, September 1994; update IIB, January 1995; update III, December 1996; update IIIA, April 1998

Please feel free to contact us if you have any questions.

Sincerely,

Steven A. Ziliak
Senior Chemist

MWBO19_WG030205_0001

Introduction

This data review covers one water sample listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8260B for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999) as there are no current guidelines for the method stated above.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- N Presumptive evidence of presence of the constituent.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II.

III. Initial Calibration

Initial calibration data were not reviewed for Level II.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No volatile contaminants were found in the method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

Internal standards data were not reviewed for Level II.

XI. Target Compound Identifications

Raw data were not reviewed for this SDG.

XII. Compound Quantitation and CRQLs

Raw data were not reviewed for this SDG.

XIII. Tentatively Identified Compounds (TICs)

Raw data were not reviewed for this SDG.

XIV. System Performance

Raw data were not reviewed for this SDG.

XV. Overall Assessment of Data

Data flags have been summarized at the end of the report.

XVI. Field Duplicates

No field duplicates were identified in this SDG.

XVII. Field Blanks

No field blanks were identified in this SDG.

CMW002_WG030405_0001MSD

Introduction

This data review covers 3 water samples listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8260B for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999) as there are no current guidelines for the method stated above.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

Raw data were not reviewed for this SDG. The review was based on QC data.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- N Presumptive evidence of presence of the constituent.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

Instrument performance was checked at 12 hour intervals.

All ion abundance requirements were met.

III. Initial Calibration

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 15.0% for each individual compound and less than or equal to 30.0% for calibration check compounds (CCCs).

For the purposes of technical evaluation, all compounds were evaluated against the 30.0% (%RSD) National Functional Guideline criteria. Unless noted above, all compounds were within the validation criteria.

Average relative response factors (RRF) for all volatile target compounds and system performance check compounds (SPCCs) were within method and validation criteria with the following exceptions:

Date	Compound	RRF (Limits)	Associated Samples	Flag	A or P
3/9/05	Acrolein Acetone Acrylonitrile Tetrahydrofuran 2-Chloroethylvinyl ether	0.02877 (≥ 0.05) 0.03685 (≥ 0.05) 0.04065 (≥ 0.05) 0.04326 (≥ 0.05) 0.00138 (≥ 0.05)	All samples in SDG E5C040421	J (all detects) R (all non-detects)	A

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

Percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were within the method criteria of less than or equal to 20.0% for calibration check compounds (CCCs).

For the purposes of technical evaluation, all compounds were evaluated against the 25.0% (%D) National Functional Guideline criteria. Unless noted above, all compounds were within the validation criteria.

All of the continuing calibration RRF values were within method and validation criteria with the following exceptions:

Date	Compound	RRF (Limits)	Associated Samples	Flag	A or P
3/9/05	Acrolein Acetone Acrylonitrile Tetrahydrofuran 2-Chloroethylvinyl ether 1,2-Dibromo-3-chloropropane	0.02579 (≥ 0.05) 0.03235 (≥ 0.05) 0.03814 (≥ 0.05) 0.03968 (≥ 0.05) 0.00142 (≥ 0.05) 0.04930 (≥ 0.05)	All samples in SDG E5C040421	J (all detects) R (all non-detects)	A

V. Blanks

Method blanks were reviewed for each matrix as applicable. No volatile contaminants were found in the method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
CMW002_WG030405_0001MS/MSD (CMW002_WG030405_0001)	Trichloroethene	71 (75-135)	69 (75-135)	-	J (all detects) UJ (all non-detects)	A

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
G5XVH1AC	Bromomethane	163 (60-140)	All samples in SDG E5C040421	J (all detects)	P

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

All internal standard areas and retention times were within QC limits.

XI. Target Compound Identifications

Raw data were not reviewed for this SDG.

XII. Compound Quantitation and CRQLs

Raw data were not reviewed for this SDG.

XIII. Tentatively Identified Compounds (TICs)

Raw data were not reviewed for this SDG.

XIV. System Performance

Raw data were not reviewed for this SDG.

XV. Overall Assessment of Data

Data flags have been summarized at the end of the report.

XVI. Field Duplicates

No field duplicates were identified in this SDG.

XVII. Field Blanks

No field blanks were identified in this SDG.

Introduction

This data review covers one water sample listed on the cover sheet including dilutions and reanalysis as applicable. The analyses were per EPA SW 846 Method 8260B for Volatiles.

This review follows a modified outline of the USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review (October 1999) as there are no current guidelines for the method stated above.

A table summarizing all data qualification is provided at the end of this report. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

Blank results are summarized in Section V.

Field duplicates are summarized in Section XVI.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
- R Quality control indicates the data is not usable.
- N Presumptive evidence of presence of the constituent.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

Instrument performance was checked at 12 hour intervals.

All ion abundance requirements were met.

III. Initial Calibration

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 15.0% for each individual compound and less than or equal to 30.0% for calibration check compounds (CCCs).

For the purposes of technical evaluation, all compounds were evaluated against the 30.0% (%RSD) National Functional Guideline criteria. Unless noted above, all compounds were within the validation criteria with the following exceptions:

Date	Compound	%RSD	Associated Samples	Flag	A or P
3/15/05	Dichlorodifluoromethane	30.109	All samples in SDG E5C070232	J (all detects) UJ (all non-detects)	A

Average relative response factors (RRF) for all volatile target compounds and system performance check compounds (SPCCs) were within method and validation criteria with the following exceptions:

Date	Compound	RRF (Limits)	Associated Samples	Flag	A or P
3/15/05	Acrolein Acetone Acrylonitrile 2-Butanone Tetrahydrofuran 2-Chloroethylvinyl ether	0.01887 (\geq 0.05) 0.01899 (\geq 0.05) 0.02611 (\geq 0.05) 0.03186 (\geq 0.05) 0.02484 (\geq 0.05) 0.00069 (\geq 0.05)	All samples in SDG E5C070232	J (all detects) R (all non-detects)	A

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

Percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were within the method criteria of less than or equal to 20.0% for calibration check compounds (CCCs).

For the purposes of technical evaluation, all compounds were evaluated against the 25.0% (%D) National Functional Guideline criteria. Unless noted above, all compounds were within the validation criteria with the following exceptions:

Date	Compound	%D	Associated Samples	Flag	A or P
3/15/05	Dichlorodifluoromethane Vinyl acetate Tetrahydrofuran 2-Chloroethylvinyl ether 4-Methyl-2-pentanone	29.02384 65.02501 29.90033 26.36261 27.63732	All samples in SDG E5C070232	J (all detects) UJ (all non-detects)	A

All of the continuing calibration RRF values were within method and validation criteria with the following exceptions:

Date	Compound	RRF (Limits)	Associated Samples	Flag	A or P
3/15/05	Acrolein Acetone Acrylonitrile 2-Butanone Tetrahydrofuran 2-Chloroethylvinyl ether	0.01630 (≥ 0.05) 0.01460 (≥ 0.05) 0.02082 (≥ 0.05) 0.02436 (≥ 0.05) 0.01741 (≥ 0.05) 0.00051 (≥ 0.05)	All samples in SDG E5C070232	J (all detects) R (all non-detects)	A

V. Blanks

Method blanks were reviewed for each matrix as applicable. No volatile contaminants were found in the method blanks with the following exceptions:

Method Blank ID	Analysis Date	Compound TIC (RT in minutes)	Concentration	Associated Samples
G6D6L1AA	3/15/05	1,2,4-Trichlorobenzene	0.30 ug/L	All samples in SDG E5C070232

Sample concentrations were compared to concentrations detected in the method blanks. The sample concentrations were either not detected or were significantly greater (>10X for common contaminants, >5X for other contaminants) than the concentrations found in the associated method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were not within QC limits. Since there were no associated samples, no data were qualified.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits with the following exceptions:

LCS ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
G6D6L1AC	Bromomethane	156 (60-140)	All samples in SDG E5C070232	J (all detects)	P

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

All internal standard areas and retention times were within QC limits.

XI. Target Compound Identifications

All target compound identifications were within validation criteria.

XII. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria.

XIII. Tentatively Identified Compounds (TICs)

Tentatively identified compounds were not reported by the laboratory.

XIV. System Performance

The system performance was within validation criteria.

XV. Overall Assessment of Data

Data flags have been summarized at the end of the report.

XVI. Field Duplicates

No field duplicates were identified in this SDG.

XVII. Field Blanks

No field blanks were identified in this SDG.

Method: Volatiles (EPA SW 846 Method 8260B)

Validation Area	Yes	No	NA	Findings/Comments
Technique Specific Criteria				
All technical holding times were met.	/			
Cooler temperature criteria was met.	/			
GC-MS Instrument Performance Check				
Were the BFB performance results reviewed and found to be within the specified criteria?	/			
Were all samples analyzed within the 12 hour clock criteria?	/			
Initial Calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	/			
Were all percent relative standard deviations (%RSD) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?				
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?				
Did the initial calibration meet the curve fit acceptance criteria?				
Were all percent relative standard deviations (%RSD) \leq 30% and relative response factors (RRF) \geq 0.05?	/			
Continuing Calibration				
Was a continuing calibration standard analyzed at least once every 12 hours for each instrument?	/			
Were all percent differences (%D) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	/			
Were all percent differences (%D) \leq 25% and relative response factors (RRF) \geq 0.05?	/			
Blanks				
Was a method blank associated with every sample in this SDG?	/			
Was a method blank analyzed at least once every 12 hours for each matrix and concentration?	/			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.	/			
Surrogate Spikes				
Were all surrogate %R within QC limits?	/			
If the percent recovery (%R) for one or more surrogates was out of QC limits, was a reanalysis performed to confirm samples with %R outside of criteria?				/
Matrix Spikes and Matrix Spike Duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.	/			
Was a MS/MSD analyzed every 20 samples of each matrix?	/			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?	/

I. Validation Acceptance Criteria				
Was an LCS analyzed for this SDG?	/			
Was an LCS analyzed per analytical batch?	/			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?	/			
II. Retention Time and Internal Standard Evaluation				
Were performance evaluation (PE) samples performed?		/		
Were the performance evaluation (PE) samples within the acceptance limits?		/		
III. Internal Standards				
Were internal standard area counts within -50% or +100% of the associated calibration standard?	/			
Were retention times within \pm 30 seconds of the associated calibration standard?	/			
IV. Target Compound Identification				
Were relative retention times (RRT's) within \pm 0.06 RRT units of the standard?	/			
Did compound spectra meet specified EPA "Functional Guidelines" criteria?	/			
Were chromatogram peaks verified and accounted for?	/			
V. Compound Quantitation (CRQLs)				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	/			
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	/			
VI. Qualitatively Identified Compounds (QICs)				
Were the major ions (> 10 percent relative intensity) in the reference spectrum evaluated in sample spectrum?			/	
Were relative intensities of the major ions within \pm 20% between the sample and the reference spectra?			/	
Did the raw data indicate that the laboratory performed a library search for all required peaks in the chromatograms (samples and blanks)?		/		
VII. System Performance				
System performance was found to be acceptable.	/			
VIII. Overall Assessment				
Overall assessment of data was found to be acceptable.	/			
IX. Field duplicates				
Field duplicate pairs were identified in this SDG.		/		
Target compounds were detected in the field duplicates.			/

METHOD: GC/MS VOA (EPA SW 846 Method 8260B)

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

$$\text{RRF} = \frac{(A_r)(C_s)}{(A_i)(C_r)}$$

average RRF = sum of the RRFs/number of standards
%RSD = $100 * \frac{(S/X)}{X}$

$$A_r = \text{Area of compound}, \quad A_i = \text{Area of associated Internal standard}$$
$$C_r = \text{Concentration of compound}, \quad C_i = \text{Concentration of Internal standard}$$
$$S = \text{Standard deviation of the RRFs}$$
$$X = \text{Mean of the RRFs}$$

#	Standard ID	Calibration Date	Compound (Reference Internal Standard)	Reported	Recalculated	Reported	Recalculated	Reported	Recalculated

METHOD: GC/MS VOA (EPA SW 846 Method 8260B)

The percent recoveries (%R) of surrogates were recalculated for the compounds identified below using the following calculation:

% Recovery: SF/SS * 100

Where: SF = Surrogate Found
SS = Surrogate Spiked

Sample ID: # 1

	Surrogate Spiked	Surrogate Found	Percent Recovery Reported	Percent Recovery Recalculated	Percent Difference
Toluene-d8	10	9.69765	97	97	0
Bromofluorobenzene		8.80566	88	88	
1,2-Dichloroethane-d4	↓	8.65020	86	86	↓
Dibromofluoromethane					

Sample ID: _____

	Surrogate Spiked	Surrogate Found	Percent Recovery Reported	Percent Recovery Recalculated	Percent Difference
Toluene-d8					
Bromofluorobenzene					
1,2-Dichloroethane-d4					
Dibromofluoromethane					

Sample ID: _____

	Surrogate Spiked	Surrogate Found	Percent Recovery Reported	Percent Recovery Recalculated	Percent Difference
Toluene-d8					
Bromofluorobenzene					
1,2-Dichloroethane-d4					
Dibromofluoromethane					

Sample ID: _____

	Surrogate Spiked	Surrogate Found	Percent Recovery Reported	Percent Recovery Recalculated	Percent Difference
Toluene-d8					
Bromofluorobenzene					
1,2-Dichloroethane-d4					
Dibromofluoromethane					

Sample ID: _____

	Surrogate Spiked	Surrogate Found	Percent Recovery Reported	Percent Recovery Recalculated	Percent Difference
Toluene-d8					
Bromofluorobenzene					
1,2-Dichloroethane-d4					
Dibromofluoromethane

METHOD: GC/MS VOA (EPA SW 846 Method 8260B)

The percent recoveries (%R) and Relative Percent Difference (RPD) of the matrix spike and matrix spike duplicate were recalculated for the compounds identified below using the following calculation:

$$\% \text{ Recovery} = 100 * (\text{SSC} - \text{SC}) / \text{SA}$$

Where: SSC = Spiked sample concentration
SA = Spike added

SC = Sample concentration

$$\text{RPD} = | \text{MSC} - \text{MSDC} | * 2 / (\text{MSC} + \text{MSDC})$$

MSC = Matrix spike percent recovery

MSDC = Matrix spike duplicate percent recovery

MS/MSD sample: MW B005-WG036705-0001

Compound	Spike Added ($\mu\text{g/L}$)		Sample Concentration ($\mu\text{g/L}$)	Spiked Sample Concentration ($\mu\text{g/L}$)	Matrix Spike		Matrix Spike Duplicate		MS/MSD	
	MS	MSD			Percent Recovery	Reported	Recalc.	Percent Recovery	Reported	Recalc.
1,1-Dichloroethene	6.8	6.25	4300	0	0	0	0	0	0	0
Trichloroethene	1		3100	3690	78.8	94	94	124	125	4.9
Benzene			5230	523	525	84	84	86	86	3.0
Toluene			524	528	518	88	88	83	83	6.2
Chlorobenzene	1	1	1	524	494	89	84	79	79	5.9

Comments: Refer to Matrix Spike/Matrix Spike Duplicates findings worksheet for list of qualifications and associated samples when reported results do not agree within 10.0% of the recalculated results.

Laboratory Control Sample Results Verification

Page: 1 of 1

Reviewer: JVZ

2nd Reviewer:

METHOD: GC/MS VOA (EPA SW 846 Method 8260B)

The percent recoveries (%R) and Relative Percent Difference (RPD) of the laboratory control sample and laboratory control sample duplicate (if applicable) were recalculated for the compounds identified below using the following calculation:

% Recovery = 100 * SSC/SA

Where: **SSC** = Spiked sample concentration
SA = Spike added

$$RPD = |LCS - LCSD| * 2/(LCS + LCSD)$$

LCS = Laboratory control sample percent recovery

LCSD = Laboratory control sample duplicate percent recovery

LCS ID: LCS

Comments: Refer to Laboratory Control Sample findings worksheet for list of qualifications and associated samples when reported results do not agree within 10.0% of the recalculated results.

METHOD: GC/MS VOA (EPA SW 846 Method 8260B)

Were all reported results recalculated and verified for all level IV samples?

Were all recalculated results for detected target compounds agree within 10.0% of the reported results?

$$\text{Concentration} = \frac{(A_i)(L_i)(DF)}{(A_i)(RRF)(V_i)(\%)}$$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{c} = Area of the characteristic ion (EICP) for the specific internal standard

= Amount of internal standard added in nanograms (ng)

RRF = Relative response factor of the calibration standard.

V. = Volume or weight of sample pruged in milliliters (ml) or grams (g).

Df = Dilution factor.

%S = Percent solids, applicable to soils and solid matrices only.

Example:

Sample I.D. #1, H:

$$\text{Conc.} = (128340) \times (16) \times ()$$

(105356) (0.17152) () ()

$$= 71.02 \text{ (25 ml)}$$

$$= 1775.5 \approx 1800 \text{ ng/L}$$
